

# Providing 100% Soluble Calcium.

The logo for Ca Plus features a stylized green arrow pointing right, composed of three parallel lines, followed by the text "Ca Plus" in a bold, green, sans-serif font.

## Benefits

- Increases Levels of Calcium
- Displaces Unwanted Salt
- Improves Water Penetration

## Calcium fertilizer that works overtime.

Calcium is one of the most underrated nutrients in the farming community. Ca Plus increases yields by providing readily available calcium, leaching salts, buffering pH, helping water penetration, and releasing tied up nutrients.

### Increases Available Calcium

Calcium is essential for all plants, and Ca Plus provides 100% soluble calcium. Calcium compounds found in soils are generally insoluble, meaning they are not available to the plant resulting in nutrient deficiencies. Plants need calcium for cell wall development and growth. A stronger cell wall structure can protect against Pathogen attacks and creates support for heavier crop loads and healthier plants.

### Improves Water Penetration & Displaces Salts

Proper water movement through soil is beneficial to plants. Reduced movement of water leads to a low supply of air and nutrients to the root zone leading to a reduction in plant growth. Applying Ca Plus will increase the levels of available calcium in the soil while freeing up magnesium and other nutrients. Calcium and magnesium help displace sodium from soil particles. The displaced sodium can then be leached out of the root area. When this happens, the soil becomes more permeable, and water infiltration improves.

### Straight Arrow Carbon Boosted

This Straight Arrow™ "Carbon Boosted" product is loaded with carbon chains to enrich nutrient uptake. Our "Carbon Boosted" fertilizers work as a natural plant metabolite, enhancing fruit quality, plant production, and crop yields.

## HOW IT WORKS

Ca Plus enters the soil profile and displaces salt from the soil particles, then leaches it out.
